FLOATING SOLID HARDWOOD FLOORING

Norwich University of Arts School of Architecture, **Norwich**
Wideboard Oak Nordic Classic

The Royal Opera House, **London**
Wideboard Oak Spicy Pepper Textured

Floating installation is a unique method where the floor is affixed using special clips, remaining unattached to the subfloor. This exceptional approach proves to be a fantastic solution for grand projects.

Fritz Hansen Showroom, **Denmark**
Wideboard Oak Boulevard Nordic Variation

Kaust Investment Management Company, **Washington**
Wideboard Oak Golden Pearl Harmony

The Silo Apartments, Copenhagen
Wideboard Oak Boulevard Nordic White Plus Harmony

Medical Technology Company, California
2-strip Parquet Beech Sylvakett Harmony

Clip installation offers a fast, easy and clean method for installing solid hardwood flooring, contrasting with glue down parquet or ceramic tiles installation. It can be directly installed on various even subfloors like concrete, hd polystyrene, old wood floor, and even existing ceramic tiles, making it ideal for both new projects and renovations.

IDEAL Bar, Copenhagen
2-strip Parquet Black Oak Harmony

Wexford County Council, Wexford
Wideboard Oak Boulevard Harmony

The Carnegie Library & Galleries, Dunfermline
Wideboard Oak Variation

Clive Christian Showroom, Paris
Wideboard Black Oak Boulevard Harmony

Classic (Select)

This grade has a uniform look with some colour and structural graining variation between the individual staves. Lighter tones of colour along the grain pattern and in the sapwood only to a limited extent. Few small knots and natural fine splits occur.

Storey's Field & Eddington Nursery, United Kingdom
2-strip Parquet Oak Classic

Musee Hyacinte Rigaud, Perpignan
2-strip Parquet Oak Harmony

Harmony (Nature)

This grade has a natural look with more colour and structural graining variation between the individual staves. Lighter tones of colour are seen along the grain pattern and in the sapwood. Medium sized knots and natural fine splits occur to some degree. Knots and other irregularities are factory filled with a one colour filler.

Garrison House, Scotland
2-strip Parquet Oak Variation

Variation (Rustic)

This grade has a rustic look with substantial colour and structural graining variation between the individual staves. Extensive areas with lighter tones of colour are seen along the grain pattern and in the sapwood. Several small and large knots and natural fine splits occur. Knots and other irregularities are to the greatest extent possible factory filled with a one colour filler.

Perkins Coie Law Firm, San Francisco
2-strip Parquet Beech Spicy Pepper Harmony

DSV Headquarter, Denmark
Wideboard Oak Harmony

Supertech HQ VIP Lounge, Noida India
2-strip Parquet Black Oak Variation

Black Oak is from ancient times known as one of nature's own products made of oak stored submerged in a bog for centuries. Natural processes cause the oak almost to become black and this characteristic colour gives the wood a very authentic expression. Through a unique colouring technique has recreated this look and together with the excellent strength properties of the oak a very exclusive product for floors is achieved.

DSV Office Poland, Warszawa
2-strip Parquet Oak Variation

Solid Hardwood refers to lumber that is made entirely from a single piece of wood. It's like using a whole tree trunk for making furniture or other items without breaking it into smaller pieces. Imagine taking a slice from the trunk of a tree, and that slice is what you use to build things. It's strong and sturdy because it's one continuous piece of wood.

Waterproof Parquet Thermo Ash Rippled

The one and only real wood flooring which is capable to stand direct water impact instead of regular ceramic tiles.

This innovative wood flooring product, born from Austria's rich history of wooden architecture in early 2000s, has quickly become a popular choice among homeowners worldwide for its unique and unparalleled properties. Unlike traditional hardwood flooring, this eco-friendly flooring option is designed to withstand direct water impact, making it perfect for use in bathrooms, around the pool, spa area and even in shower.

The product comes in panels made of single wood staves joined together. Each panel measures 7x500x900-3000mm, making it not only easy to install but also highly resistant to water damage. The thickness of these panels is similar to that of ceramic tiles, which allows customers to easily switch from ceramic tiles to wood panels at any stage of fit-out.

Another unique feature of this product is its special non-slip surface with a relaxing massage effect. This makes it not only practical and functional but also a luxurious and comfortable addition to any home.

What sets this product apart is its sustainable construction. Each panel is crafted using natural wax and thermo-treated ash, which gives it unmatched durability and resistance to water damage without compromising on the beauty of natural wood. This eco-friendly manufacturing process also ensures that the product is as environmentally friendly as it is functional.

Austria remains the leading hub for this type of flooring, and for good reason. As a nation that values sustainable design and natural materials, Austria continues to lead the way in developing innovative wood-based products that are both beautiful and durable. If you are looking to renovate your home or build a new one, this unique flooring option is definitely worth considering for its sustainability, versatility, and timeless appeal.

WOODEN WALLS

American Walnut Select

New decorative effects provide walls with fascinating geometrical patterns that are fantastically modern and dynamic.

Textures are created by using wood elements in different colours and shapes, composed in evocative modular patterns. Innovation and tradition meet through these original ideas due to exclusive, stunning design that expresses the very best in craftsmanship, as the compositions are created by hand during intall.

Our new decorative walls and flooring is the latest stag

Canestro

A hexagon stars in an intriguing pattern that recalls the weave of traditional, hand-woven raffia baskets.

This type of decoration appeals to those who like geometrical lines and gives the floor or the wall a particular flow by matching different, harmoniously repeated shapes.

Cubo

An appealing three-dimensional effect makes the floor or the wall seem to come alive, changing perspective as we approach or move away from the surface.

The refined composition surprises us with cubes created by joining three elements and repeating them in a recurring pattern.

Intreccio

The elegant weave pattern, typical of medieval art, is interpreted in an amazing, modern, unusual way.

The decorative pattern creates the illusion that the wooden elements overlap in an alternating arrangement, by juggling the natural variations in the colour of the wood.

Spina traversa

A new laying method transforms the herringbone pattern to give the floor or the wall a more dynamic, unexpected look.

The inclination of the boards breaks with tradition without forgoing the grace and harmony of the overall result.

Prisma

Arranged vertically or on the floor, wooden elements create magnificent decorative cladding that ooze charm and style.

Many laying solutions are provided by mixing different shapes, widths and heights to give a room a strong personality.

Prisma

The Forme collection is in natural wood from certified forests that are responsibly managed to protect nature and human wellbeing.

Wood species can be freely chosen from select or rustic European oak, European or American walnut, rustic European elm or Burma teak.

Patterns are composed of pre-finished, two-layer flooring: a thick solid wood, visible layer in quality wood and solid, natural wood backing. Exclusive processing and top quality raw materials ensure exceptional stability that observes nature's rhythms and absorbs humidity and temperature swings.

European Oak
Thermotreated Medium 2020

Perfect synthesis of exclusive design and fine natural materials.

Inspired by nature, the collection enhances essences of high quality, such as the American walnut and European oak, processed by master craftsmen in Italy. The decorative surfaces are made using high quality 3-Layers planks in random lengths. The combinations of colours and 4 composition modules offer extraordinary freedom of customisation.

*REGULAR COLLECTION – MOD. CU10
Great harmony, essential characteristics of the shapes and regularity of the spatial layout define the intriguing linear design of the boiserie. The embossed strips are placed alongside each other in a perfect, uniform repetition in order to bring out the natural variation in wood tones. The Regular Collection is a refined interplay of balance and proportions.*

ALTERNATING COLLECTION - MOD. CUA14
 Full and empty spaces flow in a
 extremely refined dynamic composition.
 The primary structure of the wooden
 strips is interspersed by a secondary
 structure of grooves having different
 depths that create an appealing
 abstract design. The boiserie revives the
 walls with lively elegance.

WAVE COLLECTION - MOD. CW17
The sinuous progression of the boiserie is developed through the alternation of concave and convex surfaces, soft embossing and gentle recesses. The rounded strips and recesses chase each other in an infinite and vibrating regular movement, like the waves of the sea. Wave Collection is an harmony of curved shapes that seem to float in space.

PLATONISING

Our ‘platonising’ (hydrothermal modification) process improves the qualities of wood. We do this in a completely environmentally-friendly way without chemical additives. After the process, the wood is extremely dimensionally stable and easily processable, making it suitable for the most innovative designs.

We are the only company in the world that modifies wood in this sustainable way. The patented process takes place locally in our own factory in the Netherlands. In this way, we can guarantee the continuous quality of our wood products.

Steaming (hydrothermolysis)

The process

In simplistic terms, our process consists of three steps: steaming, drying and curing. The additional process step in relation to thermal modification renders the wood less brittle and gives it the quality.

Molecular structure of untreated wood

Raw material

Fast-growing types of wood from sustainably managed, certified forests.

Step 1 Steaming (hydrothermolysis)

The wood is treated under pressure by hot steam in an autoclave. Naturally-present sugars – a culture medium for molds – are broken down.

Step 2 Drying

After the hydrothermal treatment, the wood contains a lot of moisture. So, the wood is carefully and gradually dried in one of our drying kilns.

Step 3 Curing

The wood is heated in the oven to 180 °C in a dry environment. New stable bonds come about in the wood. The relatively low temperature ensures that the wood remains strong and resilient after completion of the modification process.

Result

Excellent, dimensionally stable and aesthetic wood for every design.

STAIRS

Elevate the aesthetic and functionality of your space with our bespoke ladders and stairs. Whether you're seeking a chic ladder to access your lofted bedroom or an elegantly crafted staircase to connect floors, our custom-fit solutions are designed to seamlessly blend with your interior design visions.

Every space is unique. And so is every dream. That's why we don't believe in one-size-fits-all. Our expert craftsmen take into account the dimensions, style, and specific needs of your space, crafting pieces that are as functional as they are beautiful. From modern minimalism to timeless traditional designs, we have a solution for every taste.

Imagine a space where every element, down to the very steps you climb, is a reflection of your personal style and needs. With our custom fit ladders and stairs, you don't have to imagine. It's your space, tailor-made.
